26.07
When Meters are purchased for campus use they should also be sold with a comprehensive commissioning package to include:

- Verification of meter functionality
- Verification and documentation of physical meter and related attached component installation
- Site licenses for all new meters
- Configuration of all meters into our ION E system
- Configuration of all meters into our ION EEM system
- Integration of all meters into the campus Single line diagram in the ION E system
- If meters are “sub” to a main building meter, then the addition of the meter to the meter site diagram will be required.
- If meters are a main or a utility to the campus then a separate site diagram will be required.
- Recharge meters are to be added to the monthly reports in ION Recharge reports
- Non Recharge meters are to be added to the monthly ION Non Recharge report
