Promotional Programs
This section of the annual report presents the methods in which your agency informed both employees and customers served that a recycling program was being implemented. Below are identified the programs you reported were continued or implemented during 2000.

Procurement Activities Implemented in 2000
This section of the annual report presents your compliance with the State Agency Buy Recycled Campaign (SABRC). The activities identified below were reported as implemented or continued during 2009. (Note: Completing this section does not meet the SABRC reporting requirements (PCC Section 12162(b)).

Question/Answer
1) What is the mission statement of the State agency/large State facility?
Learning is preeminent a California State University, Fullerton. We aspire to combine the best qualities of teaching and research universities where actively engaged students, faculty, and staff work in close collaboration to expand knowledge.

Our affordable undergraduate and graduate programs provide students the best of current practice, theory, and research and integrate professional studies with preparation in the arts and sciences. Through experiences in and out of the classroom, students develop the habit of intellectual inquiry, prepare for challenging professions, strengthen relationships to their communities and contribute productively to society.

We are a comprehensive, regional university with a global outlook, located in Orange County, a technologically rich and culturally vibrant area of metropolitan Los Angeles. Our expertise and diversity serve as a distinctive resource and catalyst for partnerships with public and private organizations. We strive to be a center of activity essential to the intellectual, cultural, and economic development of our region.

2) Based on the "State Agency Waste Reduction and Recycling Program Worksheet (Part III)," briefly describe the basic components of the waste stream and where these components are generated.

Attached is the Waste Stream Study performed on the campus in 1995.

In brief, this is a large sized commuter campus with an annualized full time equivalent (FTF) student total of 19,839 students for fiscal year 1999/2000. This represents a headcount of 27,215 students. The campus has 918 FTE faculty members equating to a faculty headcount of 663 full time and 995 part time. Management and staff total 1065 full time employees and 405 part time employees. Total employees are 3128. The grounds cover 225 acres and 2,465,415 gross square feet comprised of 18 major buildings and approximately 30 ancillary buildings.

California State University, Fullerton, located in north Orange County. More the 80 percent on university graduates live within a 50-mile radius of the Fullerton campus. Cal State Fullerton has become home to one of the most diverse student bodies in the region. The university now generates more than 490 million dollars a year for the local economy.

Special academic programs supported by grants with purchases made through the University Foundations. The Library acquires books, periodicals and research materials. Maintenance materials are purchased by Physical Plant. Food and beverages are sold through vending machines, carts and at three on site locations as well as being served for special events at the stadium as well as sites throughout the campus. Construction and refurbishment of buildings requires the contracting for materials and tools. Academic and Operational furniture and support supplies are purchased through Procurement. Grounds are maintained, mowed and trimmed. All of this contributes to the waste stream.

3) Based on the worksheet (Part III), what is currently being done to reduce waste?
The campus has a ten-year-old recycling program called The Green Team. Quarterly reports have been made to the Integrated Waste Management Agency for all paper, metals, beverage containers, tires and other auto supplies, cartridges, fluorescent tubes and wood pallets collected. All furniture, computing and other equipment and tools, are used; then, if in good condition or repairable, are redistributed on campus or to local agencies or schools; then items are finally recycled or discarded for scrap, which is also recycled.

The campus has about 33 acres of turf. With the exception of about 13 acres of playing fields, grass clippings are left on the lawns to naturally compost. Some wood scrap is chipped and used as mulch in the lower beds. Our irrigation system has been updated and redesigned to reduce the use of water and labor. As areas are replanted and trees are replaced, drought resistant species are planted. Proposed parking lots and new buildings will replace more open land in the near future.

Procurement and Business Services has looked for post consumer recycled content in buying paper and supplies. When possible, recycled content has been a criteria in the selection of other products, such as benches and car stops.

The campus has eliminated the distribution of flyers for announcements or to advertise events. We now use a web based Postmaster distribution through e-mail. Faculty and staff utilize electronic calendaring, memos and messages, almost completely replacing hard copies. Only when a signature or a written response (such as a survey) is needed do we send hard copies. Purchasing is also done on line, when possible, eliminating request forms and receivers. Registration is available on line and those who use it get priority service.

4) Based on the worksheet (Part III), briefly describe the programs to be implemented to meet the 25 percent and 50 percent waste diversion goals. Please include a program implementation timeline.

The proposed Waste Prevention Policy included several ways to reduce waste immediately after its approval. These include the reduced use of non-recyclable materials and products; the reuse of office paper, two-sided copying and reduced paper distributions; packaging minimization; expanded use of electronic correspondence; regular updating and revision of mailing lists; reduced number of publications; including use life of equipment when purchasing; buying recycled, chemical container recycling, electronic distributions of plans, specs and construction documents and whenever possible, reusing and recycling surplus furniture, materials and equipment. Other steps may include more aggressive construction recycling.

5) Does the State agency/large State facility have a waste reduction policy? If so, what is it? See "Waste Reduction Policies and Procedures for State Agencies" for a sample waste reduction and recycling policy statement.

CSUF does not currently have an approved policy. A waste prevention and recycling policy has been drafted and is being reviewed for approval.

6) Briefly describe what resources (staff and/or funds) the State agency/large State facility plans to commit toward implementing its integrated waste management plan, plus meeting the waste diversion goals outlined in Public Resource Code Section 42921.
The campus currently supports the recycling program with $20,000 annually from the Non-hazardous Waste Utility Budget. Additionally, current support included approximately 15% of a position for administratively support the recycling program. The Orange County Conservation Corps currently partners with the campus and provides labor to collect recycled items including cardboard, glass bottles, aluminum cans, plastic bottles, newspapers and office paper.

Additional budget allocations have yet to be approved and are being reviewed with the Waste Prevention and Recycling Policy. Proposed items include budgetary support for staff, equipment, supplies, contracts and services.

7) This question applies only for State agencies submitting a modified IWMP: Briefly describe the waste diversion program activities currently in place.
