Campuswide Irrigation Meters

Project Description
We have installed 17 of 24 “smart” water meters that will sub meter the turf irrigation campus wide. These meters have a cellar data device that remotely reads data down to the 5 minute interval and sends the information to a dashboard that can be viewed from any smart device (computer, tablet, cell phone). In addition to reading water usage, these smart meters also have flow rate and leak detection capabilities and can send reporting notifications via email.
