Steven G. Mihaylo Hall Scotchgard Stone  
Floor Protector Project

**PROJECT DESCRIPTION:**

The first and second floors of SGMH (lobbies and hallways only) were coated with a Scotchgard protector enhanced with the Trizact diamond discs. The cement floors and terrazzo were stripped down to the bare bones, diamond cut for a more honed shine, and then scotchgarded with the protector. This will reduce the need to strip and wax every year, saving operations costs by about 35% the first year. Mopping and burnishing every few weeks is all that is needed to keep the shine with a scrubbing and recoat once a year if needed.
